THE SENTRY™ SOLUTION TO HYDRAULIC SHOCK

Positive displacement pumps create destructive pulsation and hydraulic shock due to the reciprocating nature of their stroking action, potentially damaging piping and system components. SENTRY Pulsation Dampeners and Surge Suppressors remove virtually all system shock, enhancing the performance and reliability of fluid flow in municipal, industrial, sanitary and chemical transfer applications.

- SENTRY Pulsation Dampeners, Surge Suppressors and Inlet Stabilizers come in a full range of chemically resistant materials for even the most corrosive applications.
- NSF/ANSI 61, CE, ATEX and CRN certifications available on select models.
- All SENTRY housings are made in the USA, and each unit is tested at design pressure or higher to assure proper function and leak-free operation.

AIR CONTROL OPTIONS

Adjustable | Automatic | Chargeable | Inlet Stabilizer
