WNC-APP Mobile App Device Requirements

The WNC-APP Mobile App license sends alarm data from the Wireless Call System through the facility access point (AP) network to logged in Users. Proper layout and design of your AP network is essential to the dependability and speed of your Android and iOS (Apple) devices. If you are planning to activate the option WNC-APP-V license on your Server, you will need to establish your Wi-Fi infrastructure specifically for voice communication including partitioning a bandwidth of the Wi-Fi for the server call system only and enable "Priority" for voice packets over the facility Wi-Fi.
